SUMMARY

Frontend Developer with 3 years of experience building React and Next.js applications for SaaS and enterprise platforms. Experienced in developing CRM, logistics, and operations dashboards with reusable component architecture, API integrations, frontend performance optimization, and backend-driven workflows. Skilled in JavaScript, TypeScript, Redux, REST APIs, and scalable frontend engineering practices focused on maintainability and user experience.

EDUCATION

Fullstack Web Development course, Masai School Bangalore — Sept 2022 - Feb 2023

Master of Science, DAV University Jalandhar — 2017 - 2019

SKILLS

Languages	JavaScript, TypeScript, HTML, CSS
Frontend	React.js, Next.js, Redux, Vue.js, Tailwind CSS, Bootstrap
State Management	Redux, Pinia, Vuex
Backend Fundamentals	Node.js , REST APIs ,Authentication Flows ,CRUD Operations
Other	Git, Stripe Integration, SEO Optimization
Soft Skills	Team Collaboration, Problem Solving, Adaptability, Time Management

EXPERIENCE

Frontend Developer — Internal SaaS CRM Platform — August 2025 – Present
Masters Union — *Gurgaon, Haryana*

- Built and maintained an internal SaaS-based CRM platform to manage student lead lifecycles, from lead capture to enrollment workflows.
- Developed role-based dashboards, dynamic lead forms, and data-heavy tables with filtering, sorting, pagination, and search capabilities for admissions teams handling high-volume lead data.
- Integrated frontend applications with REST APIs to support secure authentication, real-time updates, and end-to-end CRUD operations.
- Designed reusable React components and scalable UI architecture to improve maintainability and accelerate frontend development across internal tools.
- Optimized rendering performance and frontend workflows for complex dashboard interfaces and large datasets.
- Collaborated with designers, QA engineers, and backend teams in Agile sprints to deliver production-ready features and maintain release stability.
- Used Git, GitLab, and Figma for version control, design collaboration, and development workflow management.

Software Engineer — Product-based B2B SaaS — Oct 2024 – Aug 2025
Omniful — *Gurgaon, Haryana*

- Contributed to a B2B SaaS logistics platform delivering WMS, TMS, OMS, and POS solutions for enterprise retail and supply chain operations.
- Developed modular frontend features using React.js, Redux, and REST APIs for warehouse, transportation, and order management workflows.
- Built real-time dashboards and operational tracking interfaces to improve visibility across logistics and fulfillment systems.

- Improved application performance through code-splitting, lazy loading, memoization, and frontend rendering optimizations.
- Standardized reusable UI components and frontend patterns to improve consistency and reduce repetitive implementation effort across projects.
- Implemented end-to-end testing using Cypress and contributed to unit and integration testing workflows to reduce production regressions.

Frontend developer June 2023 - Oct 2024
Evomorf *Mohali, Punjab*

- Developed and maintained responsive frontend applications with a focus on reusable architecture, performance, and maintainability.
- Built user-facing features and integrated frontend systems with backend APIs to support seamless application workflows.
- Collaborated with designers and backend developers to implement scalable and user-centric interfaces across multiple projects.
- Improved frontend responsiveness and code organization through reusable components and optimized rendering practices.

PROJECTS

LeadMatrix — CRM Platform (Meritto / NoPaperForms–like)

- Built an education-focused CRM platform for managing student leads, counselor workflows, and admission operations.
- Developed reusable field rendering architecture for dynamic forms with conditional field logic, backend-driven configurations, and optimized rendering behavior for complex form workflows.
- Implemented end-to-end lead lifecycle management including lead capture, status tracking, counselor assignment, and follow-up workflows.
- Integrated Developed role-based dashboards with advanced filtering, pagination, and search for high-volume lead management.
- Built reusable UI components and scalable frontend patterns to improve consistency and maintainability.

Warehouse Management System (WMS)

- Developed operational dashboards and warehouse workflows for inventory tracking, order processing, and shipping management.
- Improved application performance using lazy loading, code-splitting, and rendering optimizations.
- Built scalable frontend modules for warehouse operations and inventory visibility.

Transportation Management System (TMS)

- Developed frontend features for shipment tracking, carrier assignment, and dispatch management workflows.
- Built real-time operational interfaces for logistics and transportation visibility.

Prodigy football website.

- Developed frontend features for a sports training platform focused on athlete engagement and registrations.
- Integrated Stripe payment workflows for secure online transactions.
- Collaborated with backend developers to support API integration and application workflows.
